

Concrete Care Guide

To help maintain your concrete, follow these simple guidelines:

Keep it clean! For light spills and stains, use warm water and a mild dish soap with a soft cloth. Avoid harsh chemicals or products containing bleach as these can damage the sealer or concrete.

Protect your concrete from hot curling irons or straighteners! We recommend using a protective mat or towel to prevent discoloration of the sealer.

Wipe away any liquids containing acids or alkali as soon as possible, as these can cause erosion to the surface.

Avoid rubbing your product with abrasive materials such as scouring pads, sponge-backs, or steel wool to prevent scratching and permanent damage.

Avoid letting items sit on the surface for extended periods, as this can cause a difference in surface texture. We recommend using trivets.

To provide an additional protective barrier, use a soft cloth and wax your concrete regularly with Crete Protect.

Avoid impact from heavy objects to prevent chipping, cracking, or breakages to the concrete.

This care guide will help keep your concrete in the best condition for years to come. Please do not hesitate to reach out to us if you have any questions or concerns.
